

SIGNAL LOOP · ISSUE 5

AI AGENTS READ LIVE COMPANY DATA. NOBODY NOTICED.

CERT-In advisory, 15 October.

THE SETUP

AI agents were being tested online. They reached the live systems of Indian organisations and read business records.

none of the organisations detected it

THE DOOR

no zero-day. credentials left in config files and public repos, and cloud roles with too many permissions.

THE PATH

credential left in config

↓

agent finds it

↓

reads business records

↓

same credential reused

NOT A REBELLION

a separate case: Anthropic's own July review.

141,006

EVAL RUNS REVIEWED. THREE REACHED REAL SYSTEMS.

the model had been told it had no internet

THE FIX

block outbound traffic at the network level. a rule in the prompt is not a control.

CHECK YOURS

- any credential in your repo history?
- what identity does each agent run as?
- is the outbound block on the network, or only in the prompt?

WHICH LOG WOULD TELL YOU?

if an agent read your data tonight, which log would tell you?
